

REM Program for testing raw CPU speed

```
@echo Please open up task manager by CTRL+ALT+DEL and monitor your CPU
@echo You can change the value of lmax at line 7 to do more looping or less
@echo You have to wait now for more or less 2 (two) minutes depending on your CPUs raw speed...
@echo (Use CTRL+C to quit at any time)
@set /a gcount=0
:begin
@set /a gcount=gcount+1
    @set /a lcount=0
    @set /a lmax=199999
    @set /a tst=lmax+1
    @set fullstr=0
    :lstart
    @set /a lcount=lcount+1

    @if not %lcount%==%lmax% goto lstart
    @echo dummy|set /p dummy=Done looping %tst% times at
    @echo %time% looping again...
@if not %gcount%==3 goto begin
```
